# OLUWAKEMI DADA

**Quality Assurance Engineer — Automation & API Testing**

oluwakemi.dada37@gmail.com | +234 807 953 4994 | Ikeja, Lagos, Nigeria | oluwakemidada.com
github.com/oluwakemie/QA_portfolio

*Results-driven QA Engineer with 4+ years leading end-to-end quality ownership across web, mobile, API, supply-chain, and conversational-AI systems. Combines Playwright automation, API and security testing (Postman, Burp Suite, OWASP Top 10), and k6 performance testing with full-cycle QA delivery — from test planning through release sign-off — in fast-moving Agile teams.*

## CORE SKILLS

**Automation & Tools:** Playwright (JS/TS, POM, E2E/regression/smoke), Cypress, Postman, Burp Suite Community Edition, k6, JMeter, Git/GitHub, GitHub Actions (CI/CD)

**Testing Disciplines:** Functional, Regression, Integration, API, Security (OWASP Top 10, IDOR, XSS, SQLi), Performance/Load, Manual & Exploratory, Mobile & Geolocation Testing

**Process & Documentation:** Test Case Design & Suite Management, Bug Tracking (JIRA, Zoho Desk), Agile/Scrum, QA Documentation & Release Sign-off, SQL/Data Validation, Chrome DevTools

## WORK EXPERIENCE

**Quality Assurance Engineer** · **Sproxil** *Jan 2025 – Present*

- Own end-to-end QA across 8+ Sproxil products spanning supply-chain traceability (Track), survey platforms, WhatsApp conversational AI, call centre/telephony systems, and mobile field data collection.
- Designed and executed 600+ test cases across functional, regression, API, security, and performance testing — covering every module from login through data export and automated triggers.
- Built Playwright + TypeScript end-to-end frameworks for the Sproxil Survey platform and a demo product (Page Object Model, custom auth fixtures, E2E/regression/smoke suites), including a 43-test suite running in GitHub Actions.
- Set up a shared QA automation repository with one GitHub Actions workflow for every product, environment-based runs, and CI secrets scoped per product.
- Run API security testing with Postman and Burp Suite, surfacing unauthenticated-endpoint, IDOR, and injection risks across the REST API surface.
- Introduced k6 load/stress testing to the QA process, uncovering a 14-second response bottleneck on an unpaginated referral-history endpoint under 100 concurrent users.
- Deliver a consistent QA artifact set every release: test plans, test case documents, defect reports, k6 performance reports, regression reports, and sign-off documentation.
- Designed and delivered a 12-week QA curriculum for 2 interns — STLC, Agile, test case design, API testing, and Playwright — applied directly to live Sproxil products.

**Software Tester** · **Eaglecrest Technologies (a Paylode company)** *Mar 2022 – Sep 2024*

- Owned functional, sanity, stress, performance, and scalability testing for SME and enterprise web/mobile applications.
- Designed and executed UAT test plans and cases, ensuring every release met client acceptance criteria before handover.
- Validated REST API behaviour, payloads, and error handling via Postman across client-facing integrations.
- Automated critical regression flows using Playwright and Cypress, reducing manual testing time on release cycles.
- Led root-cause analysis on reported defects in close collaboration with developers, from reproduction through resolution.

**Frontend Developer (Intern)** · **Paylode Services Limited** *Mar 2022 – Oct 2024*

- Maintained frontend components and features for a payment gateway platform used by more than 50 merchants in Nigeria.
- Collaborated with senior developers and designers to implement UI/UX designs and ensure seamless integration with backend systems.

## KEY PROJECTS

**Stacks — Open-Source Playwright E2E Suite** — *Personal project · 2026*

- 43-test Playwright + TypeScript suite for a library catalogue web app (registration, login, dashboard filtering, navigation guards, full user journey), built with the Page Object Model and a shared-session setup project.
- Runs in GitHub Actions on every push with the HTML report published to GitHub Pages: github.com/oluwakemie/stacks-playwright-e2e

**Sproxil Track — Supply-Chain Traceability Platform (GS1)** — *Sproxil · 2025*

- Built a 78-case suite covering the Commission → Pack → Ship → Receive → Deliver product journey, validating GS1 identifiers (SGTIN, SSCC, GLN) and multi-level SSCC parent/child packing hierarchies.
- Tested Super Admin tenant impersonation (Set Tenant/Client with GLN assignment) as a permission model distinct from serialization access, plus Regulator Profile draft/active versioning and rollback.
- Verified Data Matrix encoding and shipper-label configuration — data elements, arrangement, prefix, and date format — against live barcode preview output before finalization.
- Found and escalated a critical access-control defect during admin impersonation testing, resolved before release.

**Sproxil Survey — Survey Management Platform** — *Sproxil · 2025*

- Led QA across the full survey lifecycle — Login → Dashboard → Create Survey → Question Builder → Conditional Logic → Preview → Publish → Execute — with 200+ test cases spanning 7 question types and paginated navigation.
- Stress-tested conditional-logic edge cases — conditions pointing to deleted questions, conflicting/multiple conditions, and logic changes on already-published surveys — catching critical logic failures and skipped-question data orphaning before production.
- Verified preview-to-published parity (questions, order, required fields, logic) and enforced publish-time validation, blocking incomplete surveys and unauthorized publish attempts.
- Delivered a complete release suite — 5 defect reports, 93.5% API performance compliance, regression report, and final sign-off.

**Sproxil Verify — WhatsApp Conversational AI (TPI)** — *Sproxil · 2025*

- Authored 81 test cases across 10 suites covering guardrail/jailbreak resistance, image-based PIN verification, counterfeit reporting, and the referral/rewards lifecycle.
- Stress-tested the AI's guardrails under adversarial input — 9 of 9 security-focused cases showed zero leakage against prompt-injection and self-referral exploit attempts.
- Ran k6 load tests against the TPI webhook, catching a status-code mismatch (201 vs 200) before launch and confirming a 96.1% check pass rate at 20 concurrent users post-fix.

**Routely Shipping Platform (external client)** — *Routely · 2025*

- Delivered full QA coverage for a multi-module logistics SaaS — authentication, shipping, payments, address system, tracking, and the RoutelyOne partner program — 551 test cases at an 85.4% pass rate.
- Produced a complete release deliverable set: defect report (18 defects, 5 critical), k6 performance report, usability summary, regression report, and sign-off.
- Identified two pre-production security defects in payment and referral flows, both resolved before go-live.

*Also delivered: 3CX telephony integration testing for the Sproxil Call Centre Portal (dial pad sync, outbound call state management, agent survey assignment); the RDT geolocated check-in module (GPS capture, offline sync, visit verification — 67 cases across 11 suites); and functional/API/regression testing for LASUCOM's HR Portal (leave, appointments, exit clearance).*

## EDUCATION

**B.Sc in Computer Science** · Ajayi Crowther University, Oyo · May 2024 – Oct 2026

**HND in Computer Science** · Federal Polytechnic Ilaro, Ogun State · Sep 2019 – Dec 2021

**ND in Computer Science** · Federal Polytechnic Ilaro, Ogun State · Sep 2016 – Nov 2018

## CERTIFICATIONS

- The Complete 2024 Software Testing Bootcamp — Udemy
- Playwright with TypeScript: Zero to Hero — Udemy
- API Crash Course: How to Create, Test & Document APIs — Udemy
- Web Security Testing Fundamentals — Cisco
- Soft Skills Course Certificate — Jobberman
